

# PPP PROJECT

## Installation of equipment for fragmentation of kidney stones in health care organizations of the Kyrgyz Republic

### Description of the project

This project involves the installation of new equipment, the modernization of the technically outdated and an increase in the number of devices for distance lithotripsy through the mechanism of public-private partnership. In the context of limited public funding, this PPP project will provide the management and commercial potential of the private sector, as well as the financial capacity of investors, and will increase the efficiency of service delivery in accordance with higher standards than those existing in the republic.

To date, the Ministry of Health of the Kyrgyz Republic is proposed to install devices in the following areas: Jalal-Abad and Issyk-Kul and in the city of Bishkek.

### The main goals of the project are:

- modernization of existing facilities and equipment of the Urology Center at the National Hospital of the Ministry of Health and Social Development of the Kyrgyz Republic;
- improving the infrastructure of healthcare facilities;
- providing a more effective and efficient method of treatment and care;
- ensuring access to crushing services for a wider population;
- creating training opportunities for practitioners in kidney stone crushing and contributing to public health by improving patient recovery, quality of life and removing the burden on the hospital system from limited government funding.
